# Chapter 4

## 4.1 ClientHandler

Class for client processing.

```
#include <mdfile.h>
```

- **ClientHandler** ([ErrorHandler](#) handler)
- int [authorized](#) (int work\_sock, string file\_name, string file\_error)  
*Constructor of the [ClientHandler](#) class.*
- int [math](#) (int work\_sock)  
*is a method for calculating mathematical operations.*

### 4.1.1

Class for client processing.

for client processing

### 4.1.2

#### 4.1.2.1 authorized()

```
int ClientHandler::authorized (
    int work_sock,
    string file_name,
    string file_error )
```

Constructor of the [ClientHandler](#) class.

<i>handler</i>	Error handler.
----------------	----------------

<i>ClientHandler</i>	ClientHandler::ClientHandler(ErrorHandler handler) { m_errorHandler = handler; } /**
----------------------	--------------------------------------------------------------------------------------

Client authorization method.

<i>work_sock</i>	is a socket for working with the client.
<i>file_name</i>	is the name of the file with the user's data.
<i>file_error</i>	is the name of the file for recording errors.

<i>authorized</i>	
-------------------	--

#### 4.1.2.2 math()

```
int ClientHandler::math (
    int work_sock )
```

is a method for calculating mathematical operations.

<i>work_sock</i>	is a socket for working with the client.
------------------	------------------------------------------

<i>math</i>	
-------------	--

:

- [mdfile.h](#)
- [mdfile.cpp](#)

## 4.2 error

Class error.

```
#include <mdfile.h>
```

```
:error:
```

```
error:
```

- **error** (const std::string &what\_arg)
- **error** (const char \*what\_arg)

### 4.2.1

Class error.

Output error message

```
:
```

- [mdfile.h](#)

## 4.3 ErrorHandler

Class for error handling.

```
#include <mdfile.h>
```

- **ErrorHandler ()**

*Class for error handling.*

- static void **errors** (std::string **error**, std::string name)

*Method for writing errors to a file.*

- static int **er** (std::string file\_name, std::string file\_error)

*Method for handling errors when opening a file.*

### 4.3.1

Class for error handling.

for error handling

### 4.3.2

#### 4.3.2.1 er()

```
int ErrorHandler::er (
    std::string file_name,
    std::string file_error ) [static]
```

Method for handling errors when opening a file.

<i>file_name</i>	File name
<i>file_error</i>	File name for recording errors

#### 4.3.2.2 errors()

```
void ErrorHandler::errors (
```

```
std::string error,
std::string name ) [static]
```

Method for writing errors to a file.

<i>error</i>	Error text
<i>name</i>	File name for recording errors

:

- [mdfile.h](#)
- [mdfile.cpp](#)

## 4.4 Server

Class for the server.

```
#include <mdfile.h>
```

- [Server](#) ([ErrorHandler](#) handler)  
*Class for the server.*
- int [self\\_addr](#) (string [error](#), string file\_error, int port)  
*Method for configuring the server address.*
- int [client\\_addr](#) (int s, string [error](#), string file\_error)  
*Method for setting up the client's address.*

### 4.4.1

Class for the server.

for the server

### 4.4.2 ()

#### 4.4.2.1 Server()

```
Server::Server (
    ErrorHandler handler )
```

Class for the server.

<i>handler</i>	handler
----------------	---------

<i>for</i>	the server
------------	------------

.

### 4.4.3

#### 4.4.3.1 `client_addr()`

```
int Server::client_addr (
    int s,
    string error,
    string file_error )
```

Method for setting up the client's address.

<i>s</i>	<a href="#">Server</a> socket descriptor
<i>error</i>	Error text
<i>file_error</i>	File name for recording errors

<i>client_addr</i>	
--------------------	--

#### 4.4.3.2 `self_addr()`

```
int Server::self_addr (
    string error,
    string file_error,
    int port )
```

Method for configuring the server address.

<i>error</i>	Error text
<i>file_error</i>	File name for recording errors
<i>port</i>	<a href="#">Server</a> port

<code>self_addr</code>	
------------------------	--

# Chapter 5

## 5.1 main.cpp

Main program file.

```
#include "mdfile.h"
main.cpp:
```

- int **main** (int argc, char \*argv[])

### 5.1.1

Main program file.

<i>argc</i>	Number of command line arguments
<i>argv</i>	Array of command line arguments

## 5.2 mdfile.cpp

```
#include "mdfile.h"
#include <random>
#include <string>
```

mdfile.cpp:

## 5.3 mdfile.h

Description of the [ErrorHandler](#), [Server](#), [ClientHandler](#) and [error\\_server](#) classes.

```

#include <netinet/in.h>
#include <iostream>
#include <cassert>
#include <arpa/inet.h>
#include <cstdlib>
#include <unistd.h>
#include <ctime>
#include <fstream>
#include <sstream>
#include <string>
#include <cryptopp/cryptlib.h>
#include <vector>
#include <getopt.h>
#include <cryptopp/hex.h>
#include <cryptopp/md5.h>
mdfile.h:

```

, :

- class [ErrorHandler](#)  
*Class for error handling.*
- class [Server](#)  
*Class for the server.*
- class [ClientHandler](#)  
*Class for client processing.*
- class [error](#)  
*Class error.*

- #define **CRYPTOPP\_ENABLE\_NAMESPACE\_WEAK** 1

### 5.3.1

Description of the [ErrorHandler](#), [Server](#), [ClientHandler](#) and [error\\_server](#) classes.

Arseniy Batrakov
